

Do you have your yearly check up scheduled?
What about the next inspection for your automobile?

We all know how important these things are. But, here at Smithmyer Plumbing & Heating we would like you to stop a moment and think about what your biggest investment is, after your health and welfare.

If you are like most of us it is going to be you home.

When was the last time you had your plumbing checked? How about the heating or air conditioning system? How old is that hot water tank? How much water does your toilet use per flush? How much water is being wasted waiting for it to get hot? These are all things that we take for granted. They are not something you want to tell your friends about. “Hey you should see the great new toilet I just got!” is not going to come up in most conversations. But stop and think how many times we use the plumbing fixtures around the house. And what about your heating and air conditioning equipment? Don’t you expect it to be warm in the winter and cool in the summer?

But when do you think about having these things maintained? Again, like most of us, it is when there is no hot water or water all over the basement floor. Or getting up to a home that feels close to freezing.

Here at Smithmyer’s we have come up with a plan that can help you to keep an eye on things, our Home Care Club, sets up appointments to have your plumbing, heating and/or air conditioning systems checked at least once a year, a written report detailing areas of concern and information on what to look for and why, priority scheduling and pricing and much more.

Just give us a call at 814-942-9393 for more information, to ask any questions or to sign up. This is not an extended warranty or an insurance policy it is a plan to help you keep all the systems in your home running smoothly, efficiently and as long as possible.

We hope you will see how giving your most valuable asset a regular “check up” will help keep it running smoothly.
